The Industrial Revolution was the transition to new manufacturing processes in the period from about 1760 to sometime between 1820 and 1840. This transition included going from hand production methods to machines, new chemical manufacturing and iron production processes, the increasing use of steam power, the development of machine tools and the rise of the factory system.

Water vapor is the component of air which can vary the most from place to place, from day to day, even hour to hour. The amount of water vapor in air will literally change with the weather and other variables such as proximity to large bodies of water, and the temperature of the water in those nearby lakes, seas and oceans.
