The Gas Processing Progression covers equipment and processes primarily focused on the handling of natural gas and its associated liquids. Main topics covered include fundamentals, natural gas characterization, phase behavior, vapor-liquid equilibrium, basic thermodynamics, and water-hydrocarbon behavior, as well as all the key equipment to process natural gas.

Floating liquefied natural gas (FLNG) refers to water-based liquefied natural gas (LNG) operations employing technologies designed to enable the development of offshore natural gas resources. Floating above an offshore natural gas field, the FLNG facility produces, liquefies, stores and transfers LNG (and potentially LPG and condensate) at sea before carriers ship it directly to markets.

Flowsheets that use ChemSep. We use COCO as tool for testing ChemSep columns in (petro)chemical process simulations. This free simulation tool is a great platform for students to become familiar with various commercial chemical processes and the simulation techniques required for design and optimization of chemical process plants.
