

mathematical statistics data analysis pdf

Statistics is a branch of mathematics dealing with the collection, organization, analysis, interpretation and presentation of data. In applying statistics to, for example, a scientific, industrial, or social problem, it is conventional to begin with a statistical population or a statistical model process to be studied. Populations can be diverse topics such as "all people living in a country ...

Statistics - Wikipedia

Structured data analysis is the statistical data analysis of structured data. This can arise either in the form of an a priori structure such as multiple-choice questionnaires or in situations with the need to search for structure that fits the given data, either exactly or approximately. This structure can then be used for making comparisons, predictions, manipulations etc.

Should the question be framed differently? How is data science different from data analysis? Data analysis seems to encompass all of "data science" and more because it involves models, visualization, simulation and significance testing or testing for independence, and attempts to answer questions about causality or what factors account for variability in a distribution.
