The first annual "Humies" competition was held at the 2004 Genetic and Evolutionary Computation Conference (GECCO-2004) in Seattle. Entries were solicited for cash awards for human-competitive results that were produced by any form of genetic and evolutionary computation and that were published in the open literature during previous year.

Multiple-criteria decision-making (MCDM) or multiple-criteria decision analysis (MCDA) is a sub-discipline of operations research that explicitly evaluates multiple conflicting criteria in decision making (both in daily life and in settings such as business, government and medicine). Conflicting criteria are typical in evaluating options: cost or price is usually one of the main criteria, and ...

Two main principles for the adaptation of parameters of the search distribution are exploited in the CMA-ES algorithm. First, a maximum-likelihood principle, based on the idea to increase the probability of successful candidate solutions and search steps. The mean of the distribution is updated such that the likelihood of previously successful candidate solutions is maximized.

CS-102 Logical Organization of Computers . Aims There are two views of computer architecture. The traditional view, dating back to the IBM System/360 from the early 1960's, is that the architecture of a computer is the programmer-visible view of the machine, while its implementation is the province of the hardware designer.

Risk Analysis: A Quantitative Guide [David Vose] on Amazon.com. \*FREE\* shipping on qualifying offers. Risk Analysis concerns itself with the quantification of risk, the modeling of identified risks and how to make decisions from those models. Quantitative risk analysis (QRA) using Monte Carlo simulation offers a powerful and precise method for dealing with the uncertainty and variability of a ...
