

### **product design for manufacture pdf**

Product Design involves a broad approach to the designing and making of innovative / new products. Pupils/students studying Product Design should work closely with other sections of the site including the Resistant Materials, Design Process, Equipment and Processes and Electronics sections. The Graphics section may also be of interest.

Design for manufacturability (also sometimes known as design for manufacturing or DFM) is the general engineering practice of designing products in such a way that they are easy to manufacture. The concept exists in almost all engineering disciplines, but the implementation differs widely depending on the manufacturing technology.

Traditionally, design practice and design education have focused on giving form to physical things—apparel, buildings, messages, tools, and vehicles—the artifacts that constitute material culture. These artifacts are also the material of the traditional design disciplines—apparel design, architecture, graphic design, product design, and transportation design.
